

## About the College

The Radhakrishna Institute of Technology and Engineering (RITE) is a JRG Educational Trust initiative. The trust takes its roots from the life and philosophy of noted social worker and philanthropist Shri Jagdish Rai ji Gupta. The objective of the trust has been to impart education to all strata of the Indian society and to equate the Indian educated youth with the heights scaled by their counterparts abroad. Apart from this primary objective, the group continues to bear the beacon of social upliftment of the backward sections of the Indian society. The trust is home to a host of eminent members of the Indian intelligentsia which comprise the five founder members.

## About the Course

Differential equations have wide applications in various engineering and science disciplines. In general, modelling variations of a physical quantity, such as temperature, pressure, displacement, velocity, stress, strain, or concentration of a

pollutant, with the change of time  $t$  or location, such as the coordinates  $(x, y, z)$ , or both would require differential equations. Similarly, studying the variation of a physical quantity on other physical quantities would lead to differential equations. For example, the change of strain on stress for some viscoelastic materials follows a differential equation. It is important for engineers to be able to model physical problems using mathematical equations, and then solve these equations so that the behaviour of the systems concerned can be studied.

## Outcomes of Course

By the end of this course, participants will be able to know the basic fundamentals of:

- First-order differential equations
- Second-order differential equations
- The Laplace transform and series solution methods
- Systems of differential equations and partial differential equations
