

## About the College

The Radhakrishna Institute of Technology and Engineering (RITE) is a JRG Educational Trust initiative. The trust takes its roots from the life and philosophy of noted social worker and philanthrope Shri Jagdish Rai ji Gupta. The objective of the trust has been to impart education to all strata of the Indian society and to equate the Indian educated youth with the heights scaled by their counterparts abroad. Apart from this primary objective, the group continues to bear the beacon of social upliftment of the backward sections of the Indian society. The trust is home to a host of eminent members of the Indian intelligentsia which comprise the five founder members.

## About the Course

Electrocution is one of the most common hazards across construction sites. Identifying electrical hazards can help raise awareness of the risks, their severity, and how they can harm workers. Working around electricity can be very safe on the job site when workers properly identify and control hazards. But, inadequate training, lack of experience, and failure to recognize potential hazards could result in electric

shock or death. This add-on certification course is designed to provide a closer look at some common electrical hazards in the workplace and how to be safe around them. It also features a collection of electrical safety checklists which one can use to assess electrical dangers on your worksite.

## Outcomes of Course

By the end of this course, participants will be able know about:

- Safety barriers and signs to be installed to warn non-electrical workers of the hazards present in the area.
- Lock Out - Tag Out procedures to be performed at all times before commencing electrical maintenance and repairs.
- Fire risk assessments to identify areas at risk of bad wiring and circuits.
- Proper grounding of electrical equipment
- Operation of electrical equipment in wet locations.
- Hazard of use of defective or inadequate insulation at workplace.
