Principal

Copy to: 1. Management Committee for kind information  
2. Dean Academics/All HODs/ AO/NBs

Principal  
Radhakrishna Institute of Technology  
and Engineering, Bhubaneswar

## **Background**

Malnutrition occurs when an organism gets too few or too many nutrients, resulting in health problems. Specifically, it is "a deficiency, excess, or imbalance of energy, protein and other nutrients" which adversely affects the body's tissues and form. Malnutrition is not receiving the correct amount of nutrition. Malnutrition is increasing in children under the age of five due to providers who cannot afford or do not have access to adequate nutrition.

Malnutrition is a category of diseases that includes under nutrition and over nutrition. Under nutrition is a lack of nutrients, which can result in stunted growth, wasting, and underweight. A surplus of nutrients causes over nutrition, which can result in obesity. In some developing countries, over nutrition in the form of obesity is beginning to appear within the same communities as under nutrition.

Most clinical studies use the term 'malnutrition' to refer to under nutrition. However, the use of 'malnutrition' instead of 'under nutrition' makes it impossible to distinguish between under nutrition and over nutrition, a less acknowledged form of malnutrition. Accordingly, a 2019 report by The Lancet Commission suggested expanding the definition of malnutrition to include "all its forms, including obesity, under nutrition, and other dietary risks. The World Health Organization and The Lancet Commission have also identified the double burden of malnutrition," which occurs from "the coexistence of over nutrition (overweight and obesity) alongside under nutrition (stunted growth and wasting).

## **Target Audience:**

People of Sheulakunda, Pipili

## **Objective:**

To aware the People of Sheulakunda about "Malnutrition and Its Eradication".
